DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to a chimeric protein, classified in class 530, subclass 350.
 - II. Claims 11, drawn to cell expressing a chimeric protein, classified in class 435, subclass 325.
 - III. Claims 12-15, drawn to nucleic acids and host cell, classified in class 435, subclass 69.1.
 - IV. Claims 16-29, drawn to a method of isolating specific cells, classified in class 435, subclass 325.

2. The inventions are distinct, each from the other because of the following reasons:

The products of inventions I and III are related to the cell of invention II by virtue of expressing same. Although the products and cell are related since the cell expresses claimed protein and nucleic acids, they are distinct inventions because the products can be use by another and materially different process isolated away from the cell, such as in the production of antibodies on in any diagnostic or research method (PCR, hybridization). Thus, they can be unconnected in use and operation and are patentably distinct.

The nucleic acids of invention III are related to the protein of invention I by virtue of encoding same. The DNA molecule has utility for the recombinant production of the protein in a host cell, as recited in the claims of invention III. Although the DNA molecule and protein are related since the DNA encodes the specifically claimed protein, they are distinct inventions because the protein product can be made by another and materially different process, such as by

Art Unit: 1653

synthetic peptide synthesis or purification from the natural source. Further, the DNA may be used for processes other than the production of the protein, such as nucleic acid hybridization assay. Thus, they can be unconnected in use and operation.

Inventions IV discloses a method for detecting the product of invention I-III and are thus related. However, the inventions are patentably distinct because the product of inventions I-III need not be present during the detection process and thus the method of invention IV can neither utilize the products of inventions I-III nor be used to make such products.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II-IV, restriction for examination purposes as indicated is proper.

Advisory Information

4. A telephone call was made to Anton Bokal on July 14, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1653

application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
